Study Questions

Anatomy

1. What are the components of the lymphatic system?
2. What are the functions of the lymphatic system?
3. What is the difference between lymph capillaries and blood capillaries?
4. What is the main task of lymph capillaries?
5. What is a lymph collector?
6. What is a lymph angion?
7. Which blood vessels contain valves?
8. Which part of the lymph vascular system contains valves?
9. What does the term “lymphatic watershed” mean?
10. What is the tributary region of the axillary lymph nodes?
11. What is the tributary region of the right inguinal lymph nodes?
12. The right lymphatic duct drains certain body areas. Name some of them.
13. Why is the intestinal lymph milky white at times?
14. What is the name of the intestinal lymph?
15. Where does the thoracic duct enter into the venous system?
16. What is the tributary area of the inguinal lymph nodes?
17. What is the name of the two veins that build the “venous angle”?
18. What is the location of the thoracic duct?
19. What is the location of the cisterna chyli?
20. What does lymph fluid consist of?
21. How many lymph nodes are in the human body?
22. What are the functions of lymph nodes?
23. What are “inter-axillary” anastomoses?
24. Where in the body do we find axillo-axillary anastomoses?
